Finding	Value / Observation
Received Header Count	0 ■■ (No routing headers; impossible for a genuine sent email)
Attachment	Recommendation.docx
Attachment Creation-Date	2023-10-04T23:00:20Z
Attachment Modification-Date	2024-10-20T06:12:39Z ■■ AFTER parent email date
Size Discrepancy	Header size=1266258 vs actual=1258177 (Δ=8081 bytes)

### Analysis:

The email dated October 4, 2023, contains **zero Received headers**, which is inconsistent with how genuine Outlook/Exchange emails are transmitted. Every authentic email should contain at least one `Received` header recording mail server transit. The absence of these headers indicates that this file was **not sent natively through the mail system**, but instead exported, reconstructed, or fabricated. Additionally, the attached file **Recommendation.docx** shows a **modification-date of October 20, 2024**, which is nearly one year after the parent email date. This temporal impossibility demonstrates that the evidence has been **tampered with post hoc**. Combined with the size mismatch in MIME metadata, these anomalies show clear signs of **spoliation and fabrication**.
